The Problem

Universal Travels Inc. is considering creating a website that sells trips. The first step the executive team has decided on is to create a survey site that will be linked to from a couple of local websites. The team has asked you to help them get to know their customers better. They want you to create a survey that asks the user about their most recent trip. If the customer hasn't gone on a trip lately, then they want to ask them what a set of other questions.

The Approach

Create one website. The first page will ask the user whether or not they have taken a trip lately. If they have, send them to the trip survey page. If they haven't, send them to the travel survey page. After the user has submits the page, send them to a page that thanks them for answering the particular survey page they were on.

Note: You will have to pass the type of survey from the first page to the "Thank you" page.

The following are the questions and answers for the trip survey are:

1. Question: How many vacations do you take a year?
Answers: Let the user choose one of the following: 1-2, 3-4 or 5+
2. Question: Did you enjoy your trip?
Answers: Let the user choose Yes or No
3. Question: What services did you use on your trip?
Answers: Let the user choose any of the following: Hotel, Car, Bus, Plane, Restaurant, and Tour Guide

The following are the questions and answers for the travel survey page

1. Question: When are you planning on taking your next vacation?
Answers: Let the user choose one of the following: 1 Month, <3 Months, >3 Months
2. Question: What type of vacation do you prefer?
Answers: Let the user choose any of the following: Adventure, Relaxing, Exploring, Romantic, Foreign

3. Question: What is your budget for your next trip?
Answers: Let the user type in any value

The thank you should say thank you for answering the < **Travel or Trip** > survey.

Documentation

It is important for every developer to produce documentation for his development. So you must provide a one to two page document that says how your website works. In this document provide a diagram of what pages are involved in your website, how the user navigates between them, and what information, if any, you are passing between pages and how you are doing that.

Important :

Your code must be properly commented and your variables, files, project well named.
